It is used primarily for drafting, and also contains many tools for creating architectural design. AutoCAD is used by architects, builders, engineers, and designers to create 2D and 3D drawings, and it includes a wide range of 2D tools such as lines, arcs, and circles. AutoCAD also includes powerful tools for 3D modelling and 3D plotting, and includes tools for advanced surface modelling, contour plotting, and advanced dimensioning. AutoCAD supports DWG, DGN, DXF, and PDF files and can import/export AutoCAD, DXF, DWG, and EPS files. AutoCAD is a fully integrated 2D and 3D product, so it includes powerful 2D and 3D tools, including mass properties, AutoTune, and AutoPlot. Why choose AutoCAD? Q: How to choose a "compact" GPU-less video encoder? When I want to transfer a video from my computer to another computer using a wireless connection, I often do it by transcoding the video using ffmpeg, e.g. ffmpeg -i video.mp4 -vcodec libx264 -preset ultrafast -b:v 1500k -b:a 128k -c:a pcm_s16le -y video.mp4 and, of course, you have to wait until the entire video has been transcoded. However, it seems that ffmpeg is a relatively fat and heavyweight app. If I use the command ffmpeg -i video.mp4 -vcodec libx264 -preset ultrafast -b:v 1500k -b:a 128k -c:a pcm_s16le -y video.mp4 I can do it while the video is being transcoded, but I would prefer to do it in real time, but apparently ffmpeg doesn't support this mode. I've been searching for a light-weight command line application, but I haven't found any. Any suggestions? A: You can try fast-video-streaming, and you don't need to use a GPU. It's a libx264 wrapper which comes with ffmpeg. For example: ffmpeg -i - -i - -y -vf "format=pix_fmts=yuva420p" -movflags +faststart If you want to transcode to a lower resolution/bitrate video, you can use the -vf (video filter) option with the -framerate or -r (fps) option, for example: ffmpeg -i - -i - -y -vf "format=pix_fmts=yuva420p" -framerate 30 -

Importing and incorporating feedback from multiple projects at once: Select several drawing files and simultaneously import the feedback of the open files or pages into the current drawing file, then include the changes in the current drawing using the "Markup Assist" function. (video: 1:22 min.) The Markup Assist function has been improved to make it more intuitive, so you can now include blocks or text in drawings that are imported from PDFs or export files. (video: 1:30 min.) Markup Assist: Include blocks and text in your drawings automatically, using feedback from the exported files or pages. You can add blocks to any drawing where blocks have been previously imported or imported. (video: 1:30 min.) Trim: Trim layers to a precise location along a closed path. (video: 1:19 min.) Extrude: Extrude a series of layers to a specific thickness. (video: 1:05 min.) We've changed the default units to match metric. The units on a coordinate system change automatically to match the units used in the current drawing. In drawings where multiple units are defined, they now always apply to the entire drawing. (video: 1:50 min.) Views: The default views for All Drawing Views (Default View), Navigator View (Navigator), and the list of saved views have been updated to be more intuitive and readable. For example, you can now quickly see all the views used in your drawing, or which views have been saved. (video: 1:27 min.) Navigation: Navigation is now available when you zoom in. (video: 1:16 min.) The new Navigation options: Navigate the canvas by changing views, by navigating to a specific location, or by moving to a specific view. (video: 1:31 min.) Navigation from external programs: Navigate to a specific view when you open or close a drawing file. Closed loop edit: Change a geometric entity by using a tool that works on the closed loop path, regardless of how many times you move the tool. For example, you can cut or copy paths with the Move or Copy commands. (video: 1:38 min.) View control in the Command line: Use
