History AutoCAD started as a project of a group of students at the University of Illinois at Urbana–Champaign. It was originally called DWG-1 (Drawing With Graphics), and was written by John Walker, Lawrence D. Becker and Howard Beal. Becker wrote the first code to create a data file with drawing data, and this code became the basis for the whole project. This was based on

Becker's prior experience with earlier CAD software from Sinclair. The code was originally written in BASIC, and later rewritten in an assembly language which was used for compiling the complete software into a usable form. The original BASIC program was written by Becker and Walker in December 1982, and was shown at the 18th IEEE Conference on Computer-Aided Design. The first version was a freeware CAD package for MS-DOS and CP/M-based systems, including the soon to be released PC. The first public version of DWG-1 was released in November 1983 to beta testing.

The beta version was completed in May 1984, but the name was changed from DWG-1 to AutoCAD 1.0 in September 1984. In June 1984, the University of Illinois purchased a license for a version for the Apple II, and Becker became the full-time employee of Autodesk. The Apple II version of AutoCAD could not use the AutoCAD Assembly Language, because the Apple II could not use two assembly languages at once, so Becker added his own assembly language, which included an extended C-like dialect and was significantly different from the original assembly language. The Macintosh version followed in October 1985. The original code was written in IBM mainframe Assembler, and the Macintosh version was written in a small Macintosh assembler with a simple debugging system, in order to make it as compact as possible, and was called DWG-2.

Although the early releases were written in assembly code, the code was not executable. After the release of the first public version, the development cycle was reduced from a year to one month. In early June 1985, AutoCAD was released to industry. The AutoCAD 2.0 Version was released to the public in June 1986, and began a rapid expansion in popularity. Due to the introduction of 3D capabilities in AutoCAD 2.5, AutoCAD 3.0 (released in January 1988) introduced new programming languages, C and C++, and was the first release a1d647c40b

For more info, please visit this link - Mitt Romney's political career got off to a rocky start on Monday when he was booed at a New Hampshire campaign event for blasting an Obama administration plan to "punish" China for not buying enough U.S. goods. The former Massachusetts governor's campaign has been trying to highlight Obama's supposed softness on China, and the remarks Romney made in Laconia on Monday signaled that the Republican ticket is pushing the economic argument to its limits. "We do not want our jobs being shipped to China, and we certainly don't want them being shipped overseas," Romney said, according to New Hampshire Union Leader reporter Joe McQuaid. "We don't want a company in Ohio or Michigan to move its operations to China to take advantage of low labor costs and low environmental regulations," he added. "We don't want a company to move its operations to China to take advantage of low tax rates. We want a company to stay in the United States. And this plan will result in our companies having more jobs than ever before, more jobs than any time since the '80s." The comments marked a contrast with the Obama campaign's attempts to distinguish the two candidates as they vie for the Democratic nomination. Obama's economic plan was released last week, and it would lower the corporate tax rate from 35 to 28 percent and eliminate tax loopholes for companies that move jobs overseas. "America can be the best place in the world to do business, but it's not right now," Obama said in an interview with MSNBC that aired Monday. "Businesses are staying here because they know that I've already cut their taxes, and that is why the American economy is growing at a rate that's three times faster than the rest of the world." But Romney wasn't about to let Obama off the hook that easily. He said his comments about China were meant to apply to Obama as well. "President Obama
