### What's New In?

Conflict Manager is a Windows Application that displays the original and conflicted file and allows you to choose which one to keep. The main purpose of Conflict Manager is to reduce the amount of changes that developers need to apply to source code when they are working with independent changes to the same source file. The application gives developers the ability to examine the differences between a conflicted file and its original, conflict free version and choose which version of the original file should be used in their own work. Conflict Manager can be used in the development stage or after the code has been deployed to test sites. Conflict Manager can be used in the following situations: You have developed a piece of software that is dependent on some other piece of software. You have developed a piece of software that is dependent on some other piece of software. The other piece of software you are dependent on changes frequently.
