To get a basic idea of what Photoshop is capable of, you can download and watch an introductory video on a basic task like cropping an image. Mastering Photoshop's tools The primary tools in Photoshop are the many tools. What you use depends on the purpose and the project you are working on at the moment. The main groups of tools are the following: Selection tools: The most often used tools are the Selection tools, which are available in both

the Tools panel and the main image window. You can use the Selection tools to select objects and then manipulate them. Layer manipulation tools: These tools, which are available both in the Tool Options panel and the main image window, enable you to add and subtract layers in your image. These tools can be used to manipulate the image, create masking layers, and so on. Fx tools: The tools in this group enable you to add effects to your images. When you use these tools, you no longer need to work on an individual layer. Rather, you create effects on the currently selected layer in your image. Additionally, there are two smaller groups of tools: Adjustment tools: These tools enable you to

edit the color, exposure, and contrast of your image. They are located in the Tools panel. You can use adjustment tools to change the look of your images. Other tools: These tools enable you to create objects, simulate effects, convert images between formats, and manipulate layers and paths. These tools are located in the dialog box options. The tools feature sets that are listed in the following sections enable you to perform many tasks in Photoshop. The main tools, explained in detail throughout this section, are organized around the order in which you usually use them. The more you practice using these tools, the better you become at them. But even beginners can use the tools to achieve

the results they desire. Unless you have an extremely fast computer with a lot of RAM, even Photoshop 11 shows some delays when you apply many of the more complex tools. You have to be extra careful with your commands to avoid repeated operations. Selecting and manipulating objects Although Photoshop has a number of ways to select objects for editing, you still use the selection tools. You create selections using one of these methods: Press and hold down the Shift key as you select, while moving the cursor with the Selection tool. This method enables you to select any group of pixels that

The default 'Channels' are red, blue, green and grey, but you can change the colors to any other that you can see in the image. Under the 'Adjustments' tab, you can go into the 'Filters' tab and click 'Red-Eye' and 'Rough' (pictured below). Photoshop Elements' 'Adjustments' tab. Click "Red Eye". You can also use 'Smooth' and 'Sharpen' to soften or sharpen the image. Adjusting colors to the red, orange or yellow under the "Grayscale" tab is also an easy way to adjust the image's color. Make sure you save your work before continuing. Click the 'File' icon in the top left-hand corner of the screen. A new window will open and you will see 'Create/Open…' A

new tab will open up with a number of options to choose from. Click 'Open' and a new window will open up. Open the 'Save' menu and choose 'Photoshop Elements'. You will then be presented with the 'Save as' menu with an option to change the file name. After choosing, you will be able to open up the file in Elements. Make sure you save your work before continuing. In Elements, you can change the resolution and image size. Right-click on your image. Click the 'Image' tab. Click 'Resize'. Drag to where you want your image to be. Apply the crop. Click 'OK'. Click the 'File' icon in the top left-hand corner of the screen. A new window will open and you will see 'Create/Open…' A new tab will open up

with a number of options to choose from. Click 'Open' and a new window will open up. Open the 'File' menu and choose 'Create PDF'. This should open up your image as a PDF document. Open your PDF file in a PDF viewer. (NOTE: This 05a79cecff

Motorcycle SUV Motorcycle SUVs are versatile off-road vehicles (ORVs) that can be used for two-wheeled and four-wheeled transportation. They are usually based on the platform of a vehicle such as a car or SUV, but the body can be modified to better accommodate a motorbike or to increase the capacity for passengers or cargo. A motorcycle is a self-balancing vehicle that is propelled by a motorcycle engine. As a vehicle, they have no road wheels, nor do they require brakes, a steering wheel, a dashboard, a windshield, or a license plate. Motorcycle SUVs are typically powered by combustion engines,

but alternative engines such as electric, solar or fuel cells can be used. Motorcycle SUVs are also available as hybrid vehicles, combining combustion engine power with battery electric power. General characteristics The body of a motorcycle SUV often has suspension and shock-absorbers, but lacks side-protection. A motorcycle SUV may also have a more-or-less conventional suspension system for the rear, or it may have motorcycle-style suspension for both the front and rear wheels. A motorcycle SUV can be transported on standard or high-clearance vehicle carriers, and can be towed by a vehicle such as a car or pickup. Motorcycle SUVs are classified as motorcycles (and

can be registered as motorcycles) or four-wheelers (and can be registered as four-wheelers). Passenger motorcycles can carry up to two people while four-wheelers can carry up to four people. Off-road motorcycle SUVs have been converted to standard passenger transporters with seats similar to those found in an SUV. These can carry up to five people. Some motorcycles can be modified to turn into motorcycles SUVs by adding features such as panniers for storage, and a rack for carrying cargo. As of 2006, there was no standard motorcycle SUV, since they are not subject to the same crash tests as conventional passenger cars. History In the 1920s, several companies sold small

motorcycles with standard car bodies. The motorcycle was primarily used for touring, with the passenger riding on the front fender. A few companies marketed vehicles that were basically cars with motorcycle wheels at the front and back. The term "light-frame motorcycle" was sometimes used to describe this kind of vehicle. In the 1930s, small motorcycle companies began moving to building motorcycles specifically for the purpose of being converted into SUVs. In 1944, the first motorcycle-based vehicle

Q: how to dynamically call a function with

array as arguments I have the following array of objects const options = [ {name:"N1", value:"1"}, {name:"N2", value:"2"}, {name:"N3", value:"3"}, {name:"N4", value:"4"}, {name:"N5", value:"5"} ] and the function to be called is below. function option(name,value){ return { options: [...options], single: value } } The problem is that I don't know how to dynamically call the function passing name and value as arguments. I have tried using bracket notation for options but it doesn't work as expected. I am having issues with the array properties. A: you will have to create an object from your options before passing it as an object to the option function. const options = [ {name: "N1",

value: "1"}, {name: "N2", value: "2"}, {name: "N3", value: "3"}, {name: "N4", value: "4"}, {name: "N5", value: "5"} ]; const obj = { options: options }; const newObj = { ...obj, newOption: () => { return { options: [...options], single: undefined } } }; const callFunction = (name, value) => newObj.newOption(); console.log(callFunction('N1', '1'));

Innisfree Tree Pineapple Smooth Cleansing Foam Review Innisfree, well-known as the most famous skin care brand in Korea, has established their own nature-inspired brand in the US. This line of products bears the same unique Korean style, Innisfree is known for. Their products are known for high quality and integrity. I must admit that

I was once interested in the Innisfree brand.
I was surprised with their brilliant
packaging designs
