As with older versions of Lightroom, the program is fine for a casual home user. However, there are a number of issues and issues with older releases that make Lightroom a bad choice for a pro who may need additional power. Lightroom isn't optimized for speed, and it doesn't offer any tools, now or in the past, that other apps can't. You get what you pay for, after all. I'm not sure if I'm feeling too deeply into this review, or if I've just noticed these issues or others more as I've used the app. Lightroom 5 is a fast program that creates good-looking images, but it isn't perfect when it comes to working with larger amounts of images.

When it comes to color, Adobe has a specialty. As a professional color expert, Jeff Schewe knows how to bring all the right colors to life in your images. Drag and drop whole documents right into the application directly from a Finder window in iOS. Simply open the image, drag it to the Photoshop window, and it's there. You can also import JPEGs, PDFs, EPSs, Photoshop PSDs, and other formats. I may not like Lightroom but I love Photoshop. When I started out I thought Lightroom was for Lightroom Addicts, but now I realize, you can't expect one thing like Photoshop, for Photoshop Addicts, Lightroom Addicts, and Gimp Addicts, but now I think Lightroom is for All!
